Final Project Proposal

Project Title: Shopify, Ebay Product Integration Web App

Prepared For: Ayesha Shams

Prepared By: Emmanuel A. (Insta Code)

Date: October 2025

1. Project Overview

This project focuses on developing a custom Shopify, eBay integration tool that allows users to import, manage, and synchronize their products directly from Shopify or eBay into their own dashboard. The app will include subscription-based access, multiple payment options, analytics, and post-launch support.

2. Core Features & Modules

- Shopify Integration – Secure OAuth login, real-time product sync, and management.

- Subscription System – Three plans (Starter, Pro, Business) with monthly/yearly options.

- User Dashboard – Manage subscription, view analytics, and product data.

- Admin Panel – Manage users, payments, reports, and API activities.

- Payment Integration – Visa, MasterCard, PayPal, and UnionPay supported.

- Notifications – Email and in-app alerts for order or sync updates.

- AI Insights – Suggest profitable or trending products for synchronization.

- Post-Launch Support – 30 days maintenance after delivery.

3. API Keys & Integration Details

API	Purpose	Cost	Notes
Shopify API	Fetch and sync users' store products	Free	Official Shopify API with OAuth authentication.
OpenAI API	AI product recommendations and insights	Pay-as-you-go (~$5–$15/month)	Used for AI insights.
Payment Gateway	Handle secure	Transaction-based	Supports Visa, MasterCard, PayPal,

| API | payments | | UnionPay. |

4. Subscription Plans

Available in monthly and yearly billing cycles.

Plan	Monthly	Yearly	Features
Starter	$19/month	$190/year	Basic features, up to 100 products.
Pro	$39/month	$390/year	Advanced features, up to 1,000 products.
Business	$79/month	$790/year	Unlimited products, AI insights, and automation.

5. Payment Methods

Visa, MasterCard, PayPal, and UnionPay will be supported using secure payment gateways (Stripe or PayPal API).

6. Timeline & Milestones

Phase	Duration	Deliverables
UI/UX & Setup	1 week	Design system and authentication setup.
Shopify Integration	1.5 weeks	OAuth, API sync, and product management.
Subscription & Payment	1 week	Plan setup and payment integration.
Testing & Deployment	3–5 days	Testing, optimization, and live deployment.

Total Estimated Duration: 4 weeks (1 month).

7. Project Cost

Total Cost: $900 USD (one-time development). Includes all modules, integrations, and post-launch support.

8. Post-Launch Support

Includes 30 days free maintenance for bug fixes and minor adjustments. Optional extended support available.

9. Technology Stack

- Backend: Laravel (PHP)

- Frontend: Vue.js + Tailwind CSS

- Database: MySQL

- AI Engine: OpenAI API

- Payments: Stripe / PayPal / UnionPay integration

10. Next Steps

Once approved and initial payment is made, development begins immediately. All updates and milestones will be shared via Fiverr for full transparency.
